# Contents

<b>Preface</b>	<b>7</b>
<b>Introduction</b>	<b>9</b>
Technological change – Rieter engineering in general – Textile technology as a system – Rieter spinning technology – Future developments with coordinated project groups	
<b>Short-staple spinning processes</b>	<b>13</b>
The stimulus of exhibitions – Short-staple spinning – Opening and scutching machines, stock feed – Cards and sliver conveyors – Combing machines and lap handling – Technical advances in combing machinery – Drawframes – Speedframes; ring spinning frames; ring twisting frames – Open end rotor spinning – New spinning processes – Short-staple installations and systems – The future	
<b>Long-staple spinning processes</b>	<b>37</b>
Fundamental aspects of long-staple spinning processes – Gill box/intersecting – D6 converter – «Cutdrafil» cut-and-spin process – Ring spinning frames for woollen yarns – F 2/1 long-staple speedframe – Worsted ring spinning frames – Long-staple OE rotor spinning processes – New long-staple spinning processes – Long staple: appraisal and forecast	
<b>Manmade fibre machinery and systems</b>	<b>45</b>
Links between fibre research by the chemical groups and textile machinery manufacture by Rieter – Manmade fibre lines and systems – Rieter's customers in the manmade fibre sector – Special features of machine manufacture for manmade fibre technology – Manmade fibre machinery and systems – Fine-count texturing, a complex process – Outlook	
<b>The Unikeller Division</b>	<b>55</b>
The products – The market – The future	
<b>The main partners in coordinated projects in the changing field of research and development</b>	<b>59</b>
Patents and industrial property rights – Production – Marketing, service and training – Electrical engineering – Information technology (EDP/CIM) – Financial management and controlling of projects – The changing face of quality assurance – Recycling and disposal	

## The route to the future – summing-up and forecast

73

The coming generation – Lessons for Rieter's machine manufacturing operations – Rieter's competitors at the beginning of the nineteen-nineties – Outstanding products, a reliable vehicle for the route to the future – Decisions on future production sites – Concluding remarks

## Appendix

Recent engineering management
